## INTRODUCTION

## Overview

In spring, 2020, Prevention Insights (PI) conducted the 29th Indiana Youth Survey (formerly known as the Annual Survey of Alcohol, Tobacco, and Other Drug Use by Indiana Children and Adolescents). PI has conducted the Indiana Youth Survey, and has managed and reported the resulting data, since 1991. This project is administered through a contract with the Indiana Division of Mental Health and Addiction (DMHA) of the Indiana Family and Social Services Administration (FSSA). The purpose of this project is to provide data for state and local planning with respect to the use of alcohol, tobacco, and other drugs (ATOD), gambling behaviors, and factors that research has shown to be associated with either increased or decreased likelihood of ATOD use (i.e., risk and protective factors).

In January through March 2020, local school officials administered surveys to students in Grades 6 through 12 in 281 schools throughout Indiana. Due to the COVID-19 pandemic, all Indiana schools were required to close on March 20, 2020 for the remainder of the school year (Indiana Department of Education, 2020). As a result, schools that had planned to participate near the end of the survey cycle were unable to participate. Nonetheless, a total of 90,794 youth from both public and nonpublic schools completed either paper-and-pencil or online surveys that asked about their use of various drugs, their age of first use of various drugs, and risk and protective factors. This process resulted in 85,827 usable surveys, the primary source of the data reported here. The Methodology section describes this process in more detail.

This report summarizes the findings of the 2020 Indiana Youth Survey. In addition to data from Indiana, the report contains national prevalence estimates, reported by Monitoring the Future (MTF) (Johnston et al., 2020) and the United States (US) Centers for Disease Control and Prevention's Youth Risk Behavior Survey (YRBS) (Underwood et al., 2020), to facilitate comparison with the United States as a whole.

The Indiana Youth Survey uses convenience sampling to collect data, meaning that it is a state-based survey in which any school or school corporation can participate. As noted in prior years, there are substantial advantages to collecting data in this way (e.g., Oetting \& Beauvais, 1990). For example, any school or school corporation that participates has the opportunity to receive local-level data that directly address deficits and strengths in that specific community. Such tailored findings are not available from the larger national surveys (e.g., MTF and YRBS). The Indiana Youth Survey reports facilitate local needs assessment, planning, and evaluation
of drug abuse prevention activities. PI provides a report of local results to each participating school corporation free of charge. ${ }^{1}$ In 2016, the Indiana Youth Survey also added a biennial random sampling component to be completed each evennumbered year (e.g., 2016, 2018, 2020). This year, the random sampling component of the Indiana Youth Survey was substantively interrupted by the COVID-19 pandemic, so schools that had already completed data collection for the random sample were aggregated with the convenience sample, and no unique report was prepared for the random sample.

## National Outcome Measures (NOMs)

The Government Performance and Results Act of 2010 requires government agencies to report the results of their activities. In response, the US Department of Health and Human Services' Substance Abuse and Mental Health Services Administration (SAMHSA) designated a set of measures, called the National Outcome Measures (NOMs), for substance abuse prevention (Substance Abuse and Mental Health Services Administration [SAMHSA], 2008). SAMHSA collects the NOMs through its National Survey on Drug Use and Health (NSDUH) for all states, and it reports these data for states and sub-state regions (SAMHSA, 2008). The Indiana Youth Survey collects data on the majority of the substance abuse prevention NOMs for youth, and PI also reports those data for Indiana as a whole and for the sub-state regions.

Increasingly, federal and state agencies require the NOMs for needs assessments and evaluations of local prevention programs that they fund. To compete for grants and to measure outcomes without developing new surveillance capacity, communities will need to be able to capture, track, and analyze the NOMs at the local level.

A unique benefit of participating in the Indiana Youth Survey is that participants receive NOMs data on their own schools and communities. The Indiana Youth Survey collects NOMs data on alcohol, tobacco, marijuana, and a variety of other illicit drugs for the following measures:

- thirty day prevalence of use,
- perceived risk of harm,
- age of first use, and
- perception of peer disapproval.

## Communities That Care (CTC)

Between 2005 and 2011, the state of Indiana received funding through the Strategic Prevention Framework State Incentive Grant (SPF-SIG) to expand its prevention

[^0]infrastructure and decrease substance use and related consequences. A total of 20 communities within the state were sub-recipients of these funds. Prior to the end of the grant funding, the State adopted an evidence-based planning model, called Communities That Care (CTC), to facilitate further expansion of the Strategic Prevention Framework (SPF) across Indiana's fourteen Defined Service Areas (DSAs). Although we no longer report data separated by DSA, the items measuring risk and protective factors established as part of the CTC model contribute to datadriven decision making and program evaluation.

## Changes to the Survey

No changes were made to the 6th grade survey form in 2020. However, several modifications were made to the 2020 Indiana Youth Survey 7 -12th grade survey form.

## Page 2

- Reduced the number of items collected for the age of first-time use question.

How old were you when you first used...?

## 2018

18 drugs

- Cigarettes
- Smokeless tobacco
- Cigars
- Pipe
- Electronic vaping products
- Alcohol
- Marijuana
- Synthetic marijuana
- Cocaine/crack
- Inhalants
- Methamphetamine
- A fictitious drug
- Heroin
- Hallucinogens/ecstasy
- Prescription painkillers
- Prescription stimulants
- Prescription sedatives
- Over-the-counter drugs

## Page 3

- Reduced the number of items collected for the sources of alcohol question.

During the past year, how did you get your alcohol? (Mark all that apply.)

| 2018 | 2020 |
| :---: | :---: |
| 12 options <br> - I did not drink alcohol during the past year. <br> - I bought it at a restaurant, bar, or club. <br> - I bought it at a public event (concert, sporting event). <br> - I gave someone else money to buy it for me. <br> - I bought it at a store (liquor store, convenience store, supermarket, gas station). <br> - A person 21 years old or older gave it to me. <br> - A person under 21 years old gave it to me. <br> - I took it from a store. <br> - I got it at a party. <br> - I got it from a parent/guardian. <br> - I got it from some other family member. <br> - I got it some other way. | 7 options <br> - I did not drink alcohol during the past year. <br> - I got it at a party or from someone (or my parent) without paying for it. <br> - My parent/guardian gave it to me. <br> - I took it from my home, someone else's house, or a store (without them knowing). <br> - I gave someone money to buy it for me. <br> - I bought it at a restaurant, store, bar, club, or public event (concert, sporting evert). <br> - I got it some other way. |

- Reduced the number of items collected for the sources of prescription drugs question.
During the past year, how did you get your prescription drugs that were used to get high? (Mark all that apply.)

| 2018 | 2020 |
| :---: | :---: |
| 9 options <br> - I did not use prescription drugs to get high during the past year. <br> - They were prescribed to me. <br> - My parents gave them to me. <br> - Someone other than my parent gave them to me (friend, relative, friend's parent, etc.). <br> - I took them from home without the knowledge of my parents/ guardians. <br> - I bought them from someone (friend, relative, stranger, etc.). <br> - I bought them on the internet. <br> - I took them from someone else without their knowledge. <br> - I got it some other way. | 7 options <br> - I did not use prescription drugs to get high during the past year. <br> - They were prescribed to me. <br> - My parent/guardian gave them to me. <br> - Someone other than my parent gave them to me (friend, relative, friend's parent, etc.). <br> - I took them from someone without their knowledge. <br> - I got it some other way. |

## Page 4

- Due to real-world changes in the ways that people gamble, a new group of gambling behaviors, such as competitive video gaming (esports) and video game loot boxes, was added to the survey. Wording for the new options was modified from the Pilot Study of Gambling Attitudes and Behaviors Among Iowa College Students (Losch et al., 2013).

## During the past 12 months, how often have you gambled (bet money or valuables

 on an uncertain outcome) in the following ways?
## 2018 <br> 2020

10 items

- Card games (poker, blackjack, euchre, mystery)
- Personal games of skill (pool, darts, video games)
- Sports (fantasy leagues, March Madness)
- Lottery
- Bingo
- Online (internet) gambling
- Personal challenges (like a dare)
- At a casino
- At informal locations (for example, pea shake houses)
- Bet/gambled in other ways

12 items

- Casino
- Lottery, including scratch-off tickets
- Horse track betting
- Card games (not at a casino)
- Pools (such as March Madness)
- Fantasy sports
- Video games (in game purchases, e.g., skins, loot boxes)
- Other sports betting
- Online gambling games (e.g., poker, casino-style games)
- Competitive video gaming (Esports)
- Charitable gambling (raffle tickets, bingo, etc.)
- Other
- A new question on reasons to gamble has been added to the 2020 instrument. Research suggests that students may be motivated to gamble for a number of reasons including to win money, excitement, enjoyment, boredom, and socialization. Motivations to gamble may be similar to motivations to engage in other risk behaviors.

## When you gamble, what is your most common reason for gambling?

- I do not gamble
- A source of entertainment or fun
- A source of excitement or challenge
- A way to socialize with friends
- A way to get rich
- A source of money to use for paying bills
- A source of money to support charities
- A hobby
- An escape or distraction from everyday problems
- Other
- The question on consequences of gambling has been expanded to gather more detailed information on the topic area. Wording for the new response options was modified from the Pilot Study of Gambling Attitudes and Behaviors Among Iowa College Students (Losch et al., 2013).

How often have you experienced the following consequences due to your gambling?

## 2018

2020

## 8 items

- Not sleeping
- Poor hygiene
- Loss of friendships
- Family/parent issues
- School problems
- Money issues
- Felt guilty or bad
- Depression
- A set of questions on social norms regarding peer use of drugs were added in 2018. The items came from the 2015 Positive Community Norms Student Survey by Montana Institute, LLC (The Montana Institute, 2015). However, the results that were produced by those items were difficult to interpret. Thus, the wording has been changed for 2020 in order to more clearly show how common students believe it is for other students in their school to use alcohol, cigarettes, marijuana, and prescription drugs.

## 2018

How many times in the past month (30 days) do you think MOST STUDENTS IN YOUR SCHOOL used...

- Prescription sedatives (Xanax, Valium, etc.) not prescribed to them
- Alcohol (beer, wine, liquor, wine coolers)
- Cigarettes
- Marijuana (pot, hash, weed, kush, Mary Jane)
- Prescription painkillers (OxyContin, Vicodin, Codeine, etc.) not prescribed to them
- Prescription stimulants (Adderall, Ritalin, etc.) not prescribed to them

Response options:

- Never
- 1-5 times
- 6-19 times
- 20-39 times
- 40 times or more

## 2020

In the past month (30 days), approximately WHAT PERCENTAGE of students in your school do you think used...

- Alcohol
- Cigarettes
- Marijuana
- Prescription drugs

## Response options:

- 0\%
- 10\%
- $20 \%$
- 30\%
- $40 \%$
- $50 \%$
- 60\%
- 70\%
- $80 \%$
- $90 \%$
- 100\%

## Regional Reporting

This report presents prevalence data broken out at the level of FSSA's ten sub-state planning regions. There were eight regions until 2018. DMHA introduced the ten new planning regions in 2020. These are aggregates of the state's 92 counties, as indicated in Table 1. Prevalence data for sub-state planning regions provide more targeted information than statewide data. Regional results are detailed in the Results section.

Table 1. Indiana Family and Social Services Administration Planning Regions

| Sub-state Regions | Counties |
| :--- | :--- |
| 1 | La Porte, Lake, Porter |
| 2 | Cass, Elkhart, Fulton, Howard, Kosciusko, Marshall, Miami, <br> Pulaski, St. Joseph, Starke, Wabash |
| 3 | Adams, Allen, De Kalb, Huntington, Lagrange, Noble, <br> Steuben, Wells, Whitley |
| 4 | Benton, Boone, Carroll, Clinton, Fountain, Jasper, <br> Montgomery, Newton, Tippecanoe, Warren, White |
| 5 | Blackford, Delaware, Grant, Hamilton, Hancock, Henry, Jay, <br> Madison, Randolph, Tipton, Wayne |
| 7 | Clay, Hendricks, Monroe, Morgan, Owen, Parke, Putnam, <br> Sullivan, Vermillion, Vigo |
| 8 | Marion |
| 9 | Daviess, Dubois, Gibson, Greene, Knox, Martin, Perry, Pike, <br> Posey, Spencer, Vanderburgh, Warrick, |
| 10 | Bartholomew, Brown, Clark, Crawford, Floyd, Harrison, <br> Jackson, Johnson, Lawrence, Orange, Scott, Washington |

## RESULTS

This section of the monograph summarizes

- statewide convenience sample prevalence rates for 2020,
- regional findings,
- important patterns relating risk and protective factors to substance use, and
- consequences of use.

## Alcohol, Tobacco, and Other Drugs

## Statewide Prevalence Rates

The Survey Enhancement Team implemented changes to the survey and cleaning methodology in 2015 to increase the strength of the data. These changes altered how some data were calculated and made it difficult to compare prevalence rates reported before 2015 to those reported from 2015 to 2020. Thus, calculation of trend data can appropriately be done for all years prior to 2015, and separately for 2015 through 2020, but should not be combined for all years. In addition, as always, this report contains non-statistical comparisons to national survey data.

## Highlighted Findings

In 2020, past-month prevalence rates of using electronic vapor products significantly decreased for 8th through 12th grades compared to rates reported in the 2018 Indiana Youth Survey (see Figure 1). In some cases, these decreases were substantial (such as $-5.6 \%$ for grade 12). However, it is important to remember that these changes took place over the course of two years rather than one, since the Indiana Youth Survey is no longer conducted in odd-numbered years. In addition, electronic vapor products remain - by far - the most prevalent nicotine-related product used by Indiana youth, at $13.1 \%$ prevalence for all grades combined (with the next-highest prevalence rate being 3.5\% for cigarettes; see Figure 2). Trend data for 12th grade students in Indiana and the US are also provided to facilitate interpretability (see Figure 3).

## History of Electronic Vapor Product Use in Indiana

The Indiana Youth Survey has asked about use of electronic vapor products, such as e-cigarettes, each year since 2015. Initially, we highlighted an emerging, rapid increase in e-cigarette use among youth. Prior to our addition of electronic vapor
products to the survey, in 2013, the Centers for Disease Control and Prevention (CDC) released a report based on the National Youth Tobacco Survey (NYTS) that found significant increases from 2011 to 2012 in e-cigarette use among both middleand high-school students in the US (CDC, 2013). In that report, monthly rates among middle school students had increased from $0.6 \%$ to $1.1 \%$, and monthly rates among high school students had increased from $1.2 \%$ to $2.2 \%$. In 2014, the Monitoring the Future (MTF) survey, which the Indiana Youth Survey uses as a source of national ATOD data, reported monthly use rates of $8.7 \%$ (8th grade), $16.2 \%$ (10th grade), and $17.1 \%$ (12th grade). Then, in 2015, the Indiana Youth Survey reported rates for corresponding grades in Indiana that were higher than 2014 MTF rates.

However, by the 2017 Indiana Youth Survey, past-month prevalence rates of electronic vaping product use significantly had decreased since 2015 for Indiana students in all grades except 7th. It was unclear at the time whether this was the beginning of a true downward trend in electronic vapor product use in Indiana or was simple variation in the prevalence of the behavior. Data from the 2018 Indiana Youth Survey suggested the latter, as rates of electronic vapor product use increased significantly and meaningfully for grades 7 through 12 . With the subsequent decreases in 2020, it is still premature to suggest any long-term trend in prevalence rates for Indiana youth.

Monthly Use of Electronic Vapor Products By Indiana 7th - 12th Graders, 2016-2020

* Indicates statistically significant decrease from 2018 to 2020 (p < .05)

Figure 1. Comparison of monthly use of electronic vaping products by Indiana 7th 12thgrade students

Figure 2. Monthly use of tobacco products by a combined sample of all survey respondents.

Figure 3. Monthly use of electronic vaping products by 12th-grade students, Indiana and US, 2015-2020

## Gateway Drugs

Research has shown that the majority of individuals' illicit drug use occurs only after they use cigarettes, alcohol, or marijuana. These three substances are colloquially known as "gateway drugs" (Donovan \& Jessor, 1983; Fleming, Leventhal, Glynn, \& Ershler, 1989; Bailey, 1992; Kandel \& Yamaguchi, 1993; Golub \& Johnson, 2001). There remains no scientific consensus as to the extent to which using gateway substances causally predisposes youth to using additional substances. An alternative to the gateway theory is that unmeasured common causes affect the trajectory of use for all substances (Degenhardt, Dierker, Chiu, Medina-Mora, Neumark, et al., 2010). Recent studies have implied a nuanced balance between the two; for example, a biological study indicated that nicotine may exert a priming effect on cocaine (Kandel \& Kandel, 2014), while a longitudinal study emphasized that association with drug-using peers likely moderates substance use progression (Otten, Mun, \& Dishion, 2017). In studying substance-dependent young adults, Palmer et al. (2012) proposed that "both common and substance-specific genetic and environmental factors" contribute to dependence on the three classes of gateway drugs. For communicative clarity, we retain the terminology for our report.

## Gateway Drug Use in Grades 6 to 8

## Tobacco use in Grades 6 to 8

The survey for 6th-grade students asks about a single tobacco product: cigarettes. In 2020, $1.2 \%$ of 6th-grade students reported past-month use of cigarettes; the same rate was reported in 2018. Students in 7th and 8th grades also were asked about smokeless tobacco, cigars, pipes, and electronic vapor products. For 7th grade students, the prevalence rate for cigar smoking significantly decreased in 2020. However, for 8th grade students, prevalence rates for all tobacco products significantly decreased from 2018 to 2020.

## Alcohol use in Grades 6 to 8

Past-month alcohol use rates significantly increased for students in 6th grade, and decreased for students in 8th grade. Students in 8th grade also reported a significantly lower prevalence rate for binge drinking (note: 6th grade students were not asked about binge drinking).

## Marijuana use in Grades 6 to 8

No significant differences were observed for marijuana prevalence for grades 6 to 8 .

## Gateway Drug Use in Grades 9 to 12

## Tobacco use in Grades 9 to 12

Monthly prevalence rates for all tobacco products declined for grades 9 through 12 in 2020, including cigarettes, smokeless tobacco, cigars, pipe, and electronic vapor products.

## Alcohol use in Grades 9 to 12

Past-month use of alcohol significantly decreased for students in 9th, 10th, and 11th grades, and rates for binge drinking significantly decreased for students in grades 9 through 12.

## Marijuana use in Grades 9 to 12

Past-month use of marijuana significantly decreased for students in 9th and 11th grades.

## Other Drugs

## Synthetic Marijuana Use in Grades 7 to 12

These substances have misleadingly been categorized as marijuana alternatives, but are actually "chemical grade synthetic cannabinoids" that may be sprayed onto plant matter and smoked or vaporized as a liquid (Rosenbaum, Carreiro, \& Babu, 2012; NIDA, 2015b). The likelihood of adverse effects from synthetic marijuana use is greater than from marijuana use, and some 'outbreaks' of such effects have been identified in the U.S. (White, 2017).

Comparisons of marijuana use and synthetic marijuana use indicate that monthly use of marijuana is more prevalent than use of synthetic marijuana at every grade level for which it was measured (Figure 4). These results are consistent with those from a global survey of synthetic marijuana users with a median age of 23 , which found that the vast majority of users prefer natural marijuana to synthetic cannabinoids (Winstock \& Barratt, 2013). Recent research suggests that synthetic cannabinoids likely will continue to be less popular than marijuana (Lauritsen \& Rosenberg, 2016).

In 2020, students reported prevalence rates for synthetic marijuana use that were significantly higher than the 2018 rates for all grades except 12th (data on synthetic marijuana use are not available for 6th grade students).

Figure 4. Monthly synthetic marijuana and marijuana use by Indiana 6th-12th grade students

## Methamphetamine

Students in 7th and 9th grades reported past-month prevalence rates for methamphetamine use that were significantly higher than the 2018 rates, but rates for other grades were statistically similar to the 2018 rates. The 6th-grade survey no longer asks specifically about methamphetamine (students instead respond to a prompt for 'other illegal drugs').

Table 2. Monthly use of methamphetamine by youth in Grades 7 to 12 (percentages), 2015-2020

| Grade | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ | $\mathbf{2 0 2 0}$ | Nation <br> $\mathbf{2 0 1 9}$ |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 7 | 0.2 | 0.1 | 0.1 | 0.1 | $0.2^{*}$ |  |
| 8 | 0.3 | 0.1 | 0.2 | 0.1 | 0.1 | 0.1 |
| 9 | 0.4 | 0.2 | 0.2 | 0.2 | $0.3^{*}$ |  |
| 10 | 0.5 | 0.3 | 0.3 | 0.3 | 0.3 | 0.3 |
| 11 | 0.5 | 0.5 | 0.3 | 0.3 | 0.2 |  |
| 12 | 0.5 | 0.7 | 0.3 | 0.3 | 0.4 | 0.3 |

[^1]
## Prescription Drugs

Prescription drug abuse continues to be an area of public health concern in the United States (Kirschner, Ginsburg, \& Sulmasy, 2014; NIDA, 2015a; Skolnick, 2018). In testimony before the United States Senate, Dr. Nora Volkow described the interplay between prescription opioids and the current opioid epidemic, while also identifying the potential risks of stimulant and central nervous system depressant ('sedative') prescriptions (NIDA, 2014). At the same time, nationally, the 12-17 age group is equally or less likely than the 18-25 and 26+ age groups to misuse or abuse any class of prescription substance (SAMHSA, 2017).

The 2020 Indiana Youth Survey asked about three classes of prescription drugs used without a personal prescription, specifically painkillers, stimulants, and sedatives, and included examples of different substances for each class. This is the second time that the Indiana Youth Survey has included questions about different classes of prescription substances separately, though 6th grade students were only asked about "any prescription drugs." Prevalence rates for prescription painkillers (9th through 12th), stimulants (10th and 11th), and sedatives (9th through 12th) significantly decreased in 2020 relative to 2018. No other differences were observed.

In addition, for 7th through 12th grades, it is still possible to calculate overall prescription drug use without a prescription in a way that can be compared to previous years. For 2020, overall rates of prescription drug use without a prescription decreased for grades 9 through 12, and remained statistically similar for grades 7 and 8 . The 12th grade rate in Indiana ( $2.8 \%$ ) was lower than the national 12th grade rate reported by Monitoring the Future (3.6\%) (see Figure 5).

Note. National data from the 2019 MTF are available for 12th graders only.
Figure 5. Monthly Use of Prescription Drugs without a Prescription by Indiana 6 12th Grade Students, 2020

## Heroin

Heroin has received increased public attention for its contribution to the opioid epidemic, especially in the past several years (Rudd, Seth, David, \& Scholl, 2016). At the same time, rates of use among Indiana youth remained steady in 2020 for most grades, with small but statistically significant increases in prevalence for 7th and 10th grades. No grade reported a monthly prevalence rate for heroin greater than $0.3 \%$ in the 2020 Indiana Youth Survey (note: 6th grade students did not complete this item).

## Over-the-Counter (OTC) Drugs

Primarily referring to abuse of cough syrup (Vidourek, King, \& Fehr, 2014), over-the-counter drug abuse ('use to get high') continues to be more prevalent than use of many illicit substances among Indiana youth. In 2020, prevalence rates of past month use of over-the-counter drugs to get high significantly increased for 7th through 12th grades. Sixth-grade students were not asked to complete this question.

## Hallucinogens/Ecstasy, Cocaine/Crack, and Inhalants

In 2015, hallucinogens and ecstasy were combined into a single item when assessing past month use of substances. This year, no significant differences for hallucinogens/ ecstasy were observed relative to the 2018 prevalence rates. Likewise, cocaine and
crack were combined into a single item. In 2020, the prevalence rate significantly increased for 7th grade students, but was statistically similar to 2018 for all other grades. Students in 6th grade were not asked specifically about either pair of substances. Finally, all students (including 6th grade) were asked about past-month use of inhalants. The only significant differences identified between 2020 and 2018 were for 8th grade (increase) and 9th grade (decrease).

## Race and Ethnicity

This section reports monthly (past 30-day) prevalence rates for selected drugs for three race/ethnicity categories: Non-Hispanic White, Non-Hispanic Black or African-American, and Hispanic. We provide national data for comparison. Complete prevalence rates for each of these race/ethnicity categories by grade of respondent are reported in the Frequency Tables section of this monograph.

For this section of the report, we used the Youth Risk Behavior Survey (YRBS) for national comparison data. The national survey to which we usually compare prevalence measures, Monitoring the Future, was less appropriate for comparison since it provides only approximate weights for race/ethnicity subgroups and it provides only two-year averages -rather than single-year estimates-for prevalence measures. The YRBS uses a race/ethnicity categorization similar to ours. Though YRBS questions are worded differently from ours, we chose to report in this section a concept (any use in the past 30 days) that is common to both instruments. Because the available YRBS data are from the 2017 survey, however, substantial caution should be used when comparing differences between our data and the national data as they measure different years. 2019 YRBS national prevalence rates for Grades 9 to 12 will be generated in late Summer, 2020, by the US Centers for Disease Control and Prevention. At that time, this section will be updated with comparisons to national data.

Table 3 shows the average prevalence of monthly (past 30-day) use for respondents in Grades 9 to 12 by race/ethnicity category. YRBS national prevalence rates are provided for comparison. The substances shown were those common to both surveys for past 30-day use.

This year, statistically significant differences were observed between the Indiana Youth Survey data and the YRBS data for every available substance and most race/ ethnicity substance pairings except binge drinking among Black students. Again, these results should be interpreted with great caution due to the time lapse between the two periods of data collection. Additional care should be taken when assessing differences related to electronic vapor products, as there has been considerable yearly variance in rates of monthly use of this substance class.

Table 3. Prevalence of past 30-day use of substances by race/ethnicity, students in Grades 9 to 12, 2020 Indiana Youth Survey and the 2019 Youth Risk Behavior Survey (percentages)

| Substance | IN | US | Substance | IN | US |
| :--- | ---: | ---: | :---: | ---: | ---: |
| Cigarettes | 4.4 | 8.8 | Alcohol | 19.8 | 29.8 |
| White | 4.8 | 11.1 | White | 20.3 | 32.4 |
| Black | 1.2 | 4.4 | Black | 16.3 | 20.8 |
| Hispanic | 3.7 | 7.0 | Hispanic | 17.7 | 31.3 |
| Smokeless tobacco | 2.3 | 5.5 | Binge drinking | 8.0 | 13.5 |
| White | 2.4 | 6.8 | White | 8.1 | 15.7 |
| Black | 1.0 | 3.5 | Black | 6.3 | 5.6 |
| Hispanic | 1.9 | 3.7 | Hispanic | 6.7 | 14.0 |
| Electronic vapor products | 17.1 | 13.2 | Marijuana | 12.0 | 19.8 |
| White | 17.6 | 15.6 | White | 11.0 | 17.7 |
| Black | 11.8 | 8.5 | Black | 16.2 | 25.3 |
| Hispanic | 15.9 | 11.4 | Hispanic | 13.9 | 23.4 |

Notes.
IN = 2020 Indiana Youth Survey (Gassman et al., 2020).
US = 2019 Youth Risk Behavior Survey (YRBS) (Underwood et al., 2020).
\# Binge drinking was measured during the past 2 weeks on the Indiana Youth Survey, while the YRBS measured it during the past 30 days

## Gender

This section presents an analysis of differences in substance use prevalence between males and females. For this analysis, we calculated the difference between male and female past-month (30-day) prevalence rates for each drug (see Table 4). We analyzed differences that were statistically significant ( $\mathrm{p}<.05$ ). An additional table (see Table 5) provides further prevalence data for alcohol.

Four substances had higher prevalence rates of female users in some combination of grades 7 through 11, with the majority of instances observed for electronic vapor products and alcohol (including binge drinking). The other substances were prescription drugs (any) and synthetic marijuana. Beginning with 7th grade and extending through 12th grade, males consistently reported higher prevalence rates of cigar smoking and smokeless tobacco use (except 7th grade students) than females. Higher rates of male substance use were observed intermittently elsewhere in the comparison table, as well as for binge drinking (12th grade only).

Table 4. Significant differences ( $p<.05$ ) between male and female prevalence rates for substance use in the past month
Where females' prevalence is higher, the cell is black with white text; where males' prevalence is higher, the cell is white with black text. Differences of zero and non-significant differences between genders are indicated by a dash ( - ). Sixth grade students were not asked about all substances (indicated by an empty gray box).

|  | Grade |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | 11 | 12 |
| Electronic vapor products |  | 1.4 | 2.3 | 3.0 | 3.0 | -- | -- |
| Marijuana | -- | -- | -- | -- | -- | -- | -- |

| Smokeless tobacco | -- | 1.2 | 1.0 | 2.5 | 3.0 | 5.5 |  |

Table 5. Significant differences ( $p<.05$ ) between male and female prevalence rates for alcohol use Where females' prevalence is higher, the cell is black with white text; where males' prevalence is higher, the cell is white with black text. For each drug and each gender, the largest difference across grades is underlined. Differences of zero and non-significant differences between genders are indicated by a dash (-).Sixth grade students were not asked about binge drinking (indicated by an empty gray box).

|  | Grade |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| Past month alcohol use | 0.9 | 1.2 | 2.6 | 3.5 | 4.0 | 3.4 | -- |
| Past 2-week binge drinking |  | 1.1 | 1.0 | 1.3 | 1.2 | -- | 2.6 |

## Regional Prevalence Rates

This section presents the Indiana Youth Survey results for Indiana's Family and Social Service Administration's sub-state planning regions (see Figure 6). Regional data provide more targeted information for local analyses. For the drugs studied, prevalence rates varied considerably among regions and between any given region and the state. This summary does not attempt to capture the extent of this variation; however, a few examples are provided.

Compared to all respondents, statewide, in...

- Region 6, youth were more likely to report past-month use of cigarettes (7th grade), electronic vapor products (7th grade), alcohol (7th and 8th grades), and marijuana (7th grade). Youth were also more likely to report past use of inhalants (10th and 12th grades) and marijuana (9th through 12th grades).
- Region 10 , youth were more likely to report past-month use of cigarettes (6th, 7th, 8th, 10th, and 12th grades), alcohol (6th through 10th grades), and electronic vapor products (7th and 8th), but less likely to report pastmonth use of marijuana (11th and 12th), and other differences were observed differentially by grade level as well.
- Region 5, youth reported past-month prevalence rates for most substances that were similar to the state rates, for most grades. However, 12th grade students, in particular, were less likely to report past-month use of electronic vapor products, alcohol, and marijuana.
The reasons for the regional variation are not addressed in this report. Communities may gain a better understanding of their own youth drug use by comparing their prevalence rates (in their local report) to the regional rates presented in this report.

Figure 6. Indiana Family and Social Service Administration's sub-state planning regions

## Risk and Protective Factors

## Age of First Use

Unlike in 2018, the mean age of first time use of selected substances was not consistent for 6th through 12th grades. Students in 6th and 7th grade reported the lowest mean age of initiation for prescription drugs, whereas students in 8th, 9th, 11th and 12th grades reported the lowest mean age of initiation for inhalants (tied with cigarettes for 9th grade), and students in 10th grade reported the lowest mean age of initiation for cigarettes (see Table 6). In this section, data appear to indicate that the mean age of initiation increases with grade. However, this should be interpreted carefully. There are multiple factors that may cause the mean age of initiation to vary across grade levels, including historical events, memory errors for older individuals, and changing definitions of what might constitute 'first use' for a given student (Miech, Johnston, O’Malley, Bachman, \& Schulenberg, 2015). Further, because grade levels have generally fixed sets of attending ages, mean age of initiation naturally rises with grade level (e.g., a 12 -year-old cannot report a mean age of initiation of 14 , setting a 'soft cap' on the ages of first use reported). Thus, it is most instructive to examine Table 6 vertically (meaning within a grade) rather than horizontally (between grades). Examining these data within grades suggests the progression of substance use initiation: substances with lower mean ages of firsttime use are likely used by students prior to substances with higher mean ages of first-time use.

Table 6. Mean age of first time use of substances

|  | Grade |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| Cigarettes | 10.6 | 11.2 | 11.7 | 12.5 | 13.0 | 13.8 | 14.7 |
| Electronic vapor products | -- | 11.9 | 12.6 | 13.4 | 14.2 | 14.9 | 15.7 |
| Alcohol | 10.6 | 11.1 | 11.9 | 12.8 | 13.6 | 14.4 | 15.1 |
| Marijuana | 11.0 | 11.8 | 12.6 | 13.4 | 14.1 | 14.7 | 15.4 |
| Inhalants | 10.6 | 11.2 | 11.6 | 12.5 | 13.5 | 13.7 | 14.4 |
| Prescription drugs | 10.3 | 10.9 | 11.7 | 12.6 | 13.7 | 14.4 | 15.2 |

Figure 7 displays trends in reported age of first use for cigarettes, alcohol, and marijuana in Indiana. Data shared in this figure are combined for all students who completed the survey (the 'mean age of initiation' for a substance). However, for reasons described previously, data from 2015 onward should not be compared to data collected prior to 2015.

This year, there were significant decreases in the reported age of initiation for cigarettes (from 12.99 to $12.77, \mathrm{t}=5.966, \mathrm{p}<0.001$ ), alcohol (from 13.34 to $13.10, \mathrm{t}$ $=11.376, \mathrm{p}<.001$ ), inhalants (from 12.52 to 12.21, $\mathrm{t}=3.299, \mathrm{p}<.001$ ), prescription drugs (from 13.28 to $12.53, \mathrm{t}=13.157, \mathrm{p}<.001$ ), and electronic vapor products (from 14.31 to $13.91, \mathrm{t}=20.524, \mathrm{p}<.001$ ) compared to 2018.

Note. Electronic vapor products were not measured among 6th graders.
Figure 7. Trends in average reported age of first use of various substances

## Perception of Peer Use

This is the second time that the Indiana Youth Survey has included questions about normative beliefs. The specific norms measured by the questions are 'descriptive norms,' which refer to students' perception of how other students are behaving (Cialdini, Kallgren, \& Reno, 1991). A large body of research has examined descriptive norms for a variety of psychoactive substances, generally finding that a heightened perception of peer substance use is associated with higher levels of actual use (e.g., Padon, Rimal, Jernigan, Siegel, \& Dejong, 2016; Ellickson, Bird, Orlando, Klein, \& McCaffrey, 2003). At the same time, the relationship between descriptive
norms and actual substance use is likely complex and multifaceted (Deutsch, Chernyavskiy, Steinley, \& Slutske, 2015). In the 2020 Indiana Youth Survey, for all measured substances, students perceived that higher percentages of their peers had used each substance in the past 30 days than the percentage who had actually used that substance. For example, students reported that they believed $26.5 \%$ of their peers smoked cigarettes in the past 30 days, whereas only $3.5 \%$ of students actually reported smoking in the past 30 days. This discrepancy is consistent with prior research on this subject (e.g., Neighbors, Dillard, Lewis, Bergstrom, \& Neil, 2006).

Figure 8. Comparison of perceived and actual substance use rates, 7th -12 th grade combined, 2020

## Perceived Risk of Harm

Prior research has demonstrated that perceived risk of harm of using drugs is negatively related to prevalence of use (Millstein \& Halpern-Felsher, 2002; Wild, Hinson, Cunningham, \& Bacchiochi, 2001). To examine this relationship in the Indiana Youth Survey data, respondents' perceived harm of using gateway drugs was correlated with reported monthly use of cigarettes, alcohol, and tobacco (see Table 7 for question wording). The survey measured perceived risk of harm for the three substances using this question: "How much do you think people risk harming themselves (physically or in other ways) if they... (a) smoke one or more packs of cigarettes per day, (b) smoke marijuana once or twice per week, (c) have five or more drinks of an alcoholic beverage (beer, wine, liquor) once or twice a week."

Table 7. Question wording for prevalence of monthly cigarette, alcohol, and marijuana use
Monthly Use

| Cigarettes | How many times in the last month (30 days) have you used cigarettes? |
| :--- | :--- |
| Alcohol | How many times in the last month (30 days) have you used alcohol (beer, wine, liquor, wine <br> coolers)? |
| Marijuana | How many times in the last month (30 days) have you used marijuana (pot, hash, weed, kush, <br> Mary Jane)? |

The results show that higher perceived risk of harm was associated with lower monthly use of cigarettes, marijuana, and alcohol (see Figure 9).

Figure 9. Line of best fit for the correlation of perceived risk of harm and monthly prevalence of gateway drug use.

## Perceptions of Peer Approval

Research has demonstrated that when adolescents perceive that their peers do not approve of alcohol or substance use, it may exert an influence that lowers the likelihood of use (Butters, 2004; Chassin, Presson, \& Sherman, 1984). To examine this relationship in the Indiana Youth Survey data, respondents' perceptions of peer approval were correlated with reported use of cigarettes, alcohol, and marijuana (see Table 7 for question wording).

Perceived peer approval was measured with the survey items: "How wrong do your friends feel it would be for you to... (a) smoke tobacco; (b) smoke marijuana, (c) have one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day."

The results illustrate that when reported perception of peer approval for a particular behavior is stronger, the reported level of the behavior is higher (see Figure 10).

Figure 10. Line of best fit for the correlation of perceived peer approval and monthly prevalence of gateway drug use.

## Perceptions of Parents’ Approval

Adolescents' perceptions of parental approval of substance use are positively related to the frequency of adolescents' use of alcohol, tobacco and marijuana (Briney, Brown, Hawkins, \& Arthur, 2012; McMaster \& Wintre, 1996; Lee et al., 2000; Barnes \& Welte, 1986). To examine this relationship in the Indiana Youth Survey data, respondents' perceptions of parents' approval were correlated with reported use of cigarettes, alcohol, and marijuana in the previous month (see Table 7 for question wording).

The Indiana Youth Survey data measured perceived parental approval for the use of cigarettes, alcohol, and tobacco with the following items: "How wrong do your parents feel it would be for you to... (a) smoke cigarettes?; (b) smoke marijuana?; (c) drink beer, wine, or hard liquor (vodka, whiskey, or gin) regularly (at least once or twice a month)?" Respondents tended to report engaging in these behaviors more often when they also reported stronger perceived parental approval for the behavior (see Figure 11). These findings are consistent with the research cited. The results appear in the prevalence tables.

Figure 11. Line of best fit for the correlation of perceived parental approval and monthly prevalence of gateway drug use.

## Perceived Availability of Drugs

Studies have shown that youth perceptions of available access to alcohol and other drugs put them at risk for use of tobacco, alcohol, and marijuana (Kuntsche \& Gmel, 2008; Gillespie, Neale, \& Kendler, 2008; Lipperman-Kreda \& Grube, 2009).

Perceived availability of drugs was measured by the following items: "How easy would it be for you to get... (a) Cigarettes, (b) Beer, wine or liquor (for example, vodka, whiskey or gin), (c) Marijuana, (d) A drug like cocaine, LSD or amphetamines."

The results indicate that perceptions of ease of access were associated with higher monthly use of cigarettes, alcohol, and marijuana (see Figure 12). These findings support the value of prevention actions that take into account the social acceptance of drinking and drug use and the physical availability of these substances in the community.

Figure 12. Line of best fit for the correlation of perceived availability of gateway drugs and monthly prevalence of gateway drug use.

## Access to Alcohol

A public health strategy to reduce alcohol abuse by youth is to identify the primary sources of alcohol access and to target interventions to mitigate access at those points (Dent et al., 2005). Adults over the age of 21 are common sources of alcohol access for youth (Wagenaar et al., 1996; Jones-Webb et al., 1997). However, the sources tend to vary by age. Younger adolescents tend to get alcohol from their homes and families, while older adolescents tend to get alcohol from friends and commercial sources (Harrison et al., 2000; Hearst et al., 2007).

The survey asked, "During the past year, how did you get your alcohol? Mark all that apply." The responses, as well as the percentage of respondents who reported accessing alcohol from specific sources, is shown for each grade in Table 8. This item was not included on the 6th grade instrument. This summary excludes the response 'I got it some other way,' which may include a wide variety of other methods.

Parents were the primary sources of alcohol for youth in 7th and 8th grades. In 9th grade through 12th grade, the most common source was getting it at a party.

These results are consistent with research suggesting that youth drinking could be reduced if parents and family members better understood the risk of harm to youth
that alcohol presents, as well as ways to prevent youth from accessing alcohol kept in the home (Small, Suzuki, \& Maleku, 2014). Further, laws related to hosting of underage drinking parties and/or social host liability have been endorsed by some researchers as evidence-based prevention strategies (Harding et al., 2016). In addition, the results suggest that persons age 21 and older may need to be informed of the laws (e.g. hosting, legal age) and penalties that apply to purchasing and/or otherwise supplying alcohol to minors.

Table 8. Usual sources of alcoholic beverages in the past month (percentages)

|  | Grade |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | Total |  |
| I did not drink alcohol | 90.6 | 85.5 | 81.2 | 73.8 | 71.3 | 62.2 | 80.0 |  |
| I got it at a party | 2.1 | 4.4 | 7.0 | 11.8 | 14.1 | 19.1 | 8.1 |  |
| My parents gave it to me | 3.9 | 5.3 | 5.6 | 6.5 | 8.0 | 8.6 | 5.9 |  |
| I took it from home or a store | 2.0 | 3.7 | 5.0 | 6.6 | 5.8 | 5.6 | 4.5 |  |
| I gave someone money to buy it for me | 0.3 | 0.9 | 1.8 | 4.3 | 7.0 | 11.5 | 3.2 |  |
| I bought it at a restaurant, store, or public event, | 0.1 | 0.2 | 0.2 | 0.5 | 1.1 | 1.8 | 0.5 |  |
| I got it some other way | 3.4 | 4.7 | 5.0 | 6.8 | 6.4 | 9.0 | 5.4 |  |

Note: Multiple responses allowed; percentages do not add to $100 \%$.

Figure 13. Usual Sources of Alcoholic Beverages, expressed as percentages

## Access to Prescription Drugs

The survey asked, "During the past year, how did you get your prescription drugs that were used to get high? Mark all that apply." Table 9 shows the percentages of youth who report having obtained prescription drugs in specific ways during the past month. In total, $95 \%$ of respondents indicated that they did not use prescription drugs to get high during the past month. Among those who reported use of prescription drugs to get high the most frequently identified sources were "they were prescribed to me," followed by "someone other than my parents gave then to me," and "I bought them from someone." These prevalence rates varied relatively little between grade levels. However, students in older grade levels reported higher frequencies for two sources of prescription drugs, "someone other than my parents gave them to me," and "I bought them from someone," than students in younger grade levels.

Table 9. Usual sources of prescription drugs in the past month (percentages)

|  | Grade |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{7}$ | $\mathbf{8}$ |  |  |  |  |  |  |  | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | Total |
| I did not use prescription drugs to get high | 95.9 | 95.2 | 95.2 | 94.3 | 94.7 | 94.2 | 95.0 |  |  |  |  |  |  |  |
| They were prescribed to me | 2.7 | 2.8 | 2.3 | 2.3 | 2.3 | 2.1 | 2.5 |  |  |  |  |  |  |  |
| My parents gave them to me | 0.6 | 0.7 | 0.6 | 0.4 | 0.4 | 0.5 | 0.6 |  |  |  |  |  |  |  |
| Someone other than my parents gave them to me | 0.9 | 1.2 | 1.4 | 1.7 | 1.5 | 1.8 | 1.3 |  |  |  |  |  |  |  |
| I bought them from someone | 0.4 | 0.9 | 1.0 | 1.6 | 1.7 | 1.8 | 1.1 |  |  |  |  |  |  |  |
| I took them from someone | 0.3 | 0.6 | 0.5 | 0.6 | 0.6 | 0.6 | 0.5 |  |  |  |  |  |  |  |
| I got them some other way | 0.8 | 1.0 | 1.0 | 1.1 | 0.9 | 1.2 | 1.0 |  |  |  |  |  |  |  |

Note: Multiple responses allowed; percentages do not add to $100 \%$.

## Communities That Care Risk and Protective Factors

Communities that Care (CTC) risk factors are conditions that increase the chances that children will become involved in problem behaviors in adolescence and young adulthood (Hawkins \& Catalano, 2005). Measures included in the Indiana Youth Survey from the CTC System can predict alcohol and other drug use, as well as delinquency, dropping out of school, teen pregnancy, and violence. Students with elevated risk factor scores have a higher likelihood of substance use and problem behaviors compared to those with low risk factor scores.

CTC is based on the social development strategy that has as its principal focus the strengthening of protective factors. Protective factors are conditions that have a positive influence and "protect" or "buffer" against the negative influences associated with risk factors. The research-based Social Development Model has
shown that positive social development in youth is promoted by the following basic factors: 1) opportunities for developmentally appropriate involvement; 2) skills; 3) recognition for effort, improvement, and achievement; 4) strong social bonds; and 5) clear consistent standards for behavior. Though closely related, protective factors are not the opposite of risk factors but rather reduce the effects of existing risk factors. Recent studies of the CTC model in the United States have found that it is a costbeneficial prevention system, with a benefit-cost ratio of $\$ 8.22$ per dollar invested, owing in part to prevention of delinquency and alcohol and tobacco use initiation (Kuklinski, Fagan, Hawkins, Briney, \& Catalano, 2015).

A national study determined optimal cut points used to define high and low risk and protective factor scores for students in Grades 6, 8, 10 and 12 (Arthur, Briney, Hawkins, Abbott, Brooke-Weiss, et al., 2007). In that study, a survey of risk and protective factors was sent to a large sample of students and the median score for each factor was identified; these scores were set as the cut points. Although not shown, those cut points were used in Table 10 and Table 11 to calculate the percentages of Indiana students with high and low risk and protective factor scores, respectively, by grade. Some care should be used in interpreting these cut points, as the underlying study has become somewhat old, and it is not clear how much variability might exist in these factors over time.

CTC categorizes risk and protective factors into four domains of socialization: Community, Family, School and Peer-Individual (see Table 10 and Table 11). Sixth grade students completing the shortened survey instrument were not asked to complete many of the CTC risk factor scales. In Table 10, those values are noted as being unavailable (--).

Twelve risk factors were assessed on the 7th- to 12th-grade instrument, and five risk factors were assessed on the 6th-grade instrument. For three of the risk factor scales, the percentages of youth considered to be at high risk increased with each successive grade (e.g., perceived availability of drugs, for which $18.4 \%$ [8th], 21.7\% [10th], and $25.1 \%$ [12th] of youth were at high risk). These scales were: perceived availability of drugs, parental attitudes favorable toward drug use, and attitudes favorable to drug use. For two of the risk factor scales, the percentages of youth at high risk exceeded $50.0 \%$ for at least one grade: low school commitment (8th, 10th, and 12 th) and perceived risk of drug use (6th, 8th, 10th, and 12th). These same areas of elevated risk have been present in prior years as well, and may provide indications as to needs that could be addressed in the state.

Table 10. Percentage of students with CTC risk factor scores at/below (low risk) or above (high risk) the national standard"

[^2]

Figure 14. CTC risk factors

Six CTC protective factor scales were included on both the 6th-grade and 7thto 12th-grade Indiana Youth Survey instruments. Levels of low protection at or exceeding $50.0 \%$ for at least one grade were observed for community rewards for prosocial involvement (6th, 8th, 10th, and 12th) and interaction with prosocial peers (6th). For each of the scales, levels of protection were relatively similar across grade levels, with some uneven variation, such as 6th grade students reporting a higher percentage of students at low protection for family rewards for prosocial involvement than 8 th, 10 th, or 12 th grades by a minimum of $8.2 \%$.

Table 11. Percentage of students with CTC protective factor scores at/below (low protection) or above (high protection) the national standard"

|  |  | Grade |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 6th | 8th | 10th | 12th |
| Community Domain <br> Community rewards for prosocial involvement |  |  |  |  |  |
|  | Low protection | 66.0 | 70.4 | 66.3 | 66.4 |
|  | High protection | 34.0 | 29.6 | 33.7 | 33.6 |
| Family Domain |  |  |  |  |  |
| Family opportunities for pro-social involvement | Low protection | 37.4 | 30.7 | 34.0 | 35.2 |
|  | High protection | 62.6 | 69.3 | 66.0 | 64.8 |
| Family rewards for prosocial involvement | Low protection | 44.6 | 31.5 | 36.2 | 37.4 |

|  | High protection | 48.0 | 56.6 | 58.8 | 54.5 |

Notes. \# The national standards (cut-off points) are provided by the Social Development Research Group at the University of Washington

Figure 15. CTC protective factors

## Consequences of Use

Research has shown that prevention and/or reduction of alcohol and drug use among student populations leads to a decrease in related problems (Hingson, et al., 1996; Wodarski, 1988). Communities are better positioned to address substance use if they understand the relationship of that use to school-related consequences, such as poor performance on tests or missing school.

The percentages of respondents who reported specific school-related consequences of alcohol or other drug use are shown for each grade in Table 12. The prevalence of having performed poorly on a test or project was fairly similar between 7th and 9th grades and then decreased through 12th grade. The prevalence of having missed class increased relatively consistently from 7th to 11th grade. These items were not included on the 6th-grade instrument.

Table 12. Potential consequences of ATOD use

|  | Grade |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 7 | 8 | 9 | 10 | 11 | 12 |
| Performed poorly on a test or project | \% | 8.7 | 8.9 | 8.7 | 8.3 | 7.5 | 5.5 |
|  | N | 13,974 | 15,943 | 10,943 | 11,101 | 7,537 | 6,224 |
| Missed class | \% | 5.7 | 6.2 | 6.6 | 6.3 | 6.1 | 5.1 |
|  | N | 13,932 | 15,888 | 10,920 | 11,088 | 7,524 | 6,217 |

## Substance Abuse Problems

## About the CRAFFT Screening Instrument

The CRAFFT screening instrument may be used clinically to detect whether an individual is likely to have problem substance use or a substance use disorder (Knight, Shrier, Bravender, Farrell, Bilt, et al., 1999). The purpose of including the CRAFFT in the Indiana Youth Survey is to measure the prevalence of substance use-related problems among adolescents. This has been done previously with an adolescent population in Ontario, Canada (Adlaf \& Paglia-Boak, 2007). When included in a statewide survey, the CRAFFT may provide a broad-spectrum assessment of likely risk level associated with adolescent substance use (Agley, Gassman, Jun, Nowicke, \& Samuel, 2015).

Screening instruments, such as the CRAFFT, cost little to administer but do a good job of identifying people who are at risk for having a disorder. If someone were to screen positive on the CRAFFT in a clinical setting, the clinician would likely
refer the patient for a more resource-intensive assessment to diagnose substance use disorder. In the case of substance use disorder, the criteria for such an assessment are specified in the Diagnostic Statistical Manual (DSM-V).

While many validated substance use screening tools exist, such as the CAGE, AUDIT, and DAST, current evidence favors either the CRAFFT or a revised AUDIT for adolescent populations (Mitchell, Gryczynski, O’Grady, \& Schwartz, 2013; Harris, Louis-Jacques, \& Knight, 2014). Given that the AUDIT only assesses alcohol use and the CRAFFT assesses alcohol and other substance use, this survey utilizes the CRAFFT.

The CRAFFT has six items; these are presented in Table 13. Response options for each are limited to "yes" and "no." The items in the CRAFFT scale reflect consequences, patterns, and rationales of use. Affirmative responses to two or more CRAFFT items constitute a positive screen (Knight, Sherritt, Harris, Gates, \& Chang, 2003). The CRAFFT has been validated for use with youth multiple times (e.g., Knight, Sherritt, Shrier, Harris, \& Chang, 2002), and recently with a slightly wider range of people (ages 12 to 19; Shenoi, Linakis, Bromberg, et al., 2019).

## What the CRAFFT Measures

We emphasize strongly that the CRAFFT does not diagnose a substance use disorder and that the data presented below are not estimates of the prevalence of substance use disorders in Indiana. However, the results do suggest problem use among those who screened positive. Understanding the prevalence of problem substance use among sub-populations of youth is critical for targeting effective prevention efforts. Selective or indicated prevention strategies are likely to be more appropriate for adolescents who screen positive than are universal prevention approaches.

## Results

This analysis included the 65,986 responses from students who were 12 years of age or older for which any of six CRAFFT items were completed, including an affirmative indication that the student had "Never used alcohol or drugs." Of the responses, $72.1 \%$, or 47,599 youth, had a CRAFFT score of zero; $15.5 \%$, or 10,220 youth, had a CRAFFT score of one; and $12.4 \%$, or 8,167 youth, had a CRAFFT score of two or more.

Table 13 presents the percentages of all respondents ages 12 and older who responded "yes" to each of the CRAFFT items. Results for individual CRAFFT items by grade of respondent are presented in the tables section of this report.

Table 13. Percentage of respondents, aged 12 or older, indicating "yes" for each of the CRAFFT items (n $=65,986$ )

| Item |  |  |  |  |  |  |  | \% |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Have you ever ridden in a car driven by someone (including yourself) who was high or had been using alcohol or drugs? |  |  |  |  |  |  |  | 21.5 |
| Do you use alcohol or drugs to relax, feel better about yourself, or fit in? |  |  |  |  |  |  |  | 11.0 |
| Do you ever use alcohol or drugs while you are alone? |  |  |  |  |  |  |  | 9.5 |
| Do you ever forget things you did while using alcohol or drugs? |  |  |  |  |  |  |  | 6.4 |
| Do your family or friends ever tell you that you should cut down on your drinking or drug use? |  |  |  |  |  |  |  | 3.3 |
| Have you ever gotten into trouble while you were using alcohol or drugs? |  |  |  |  |  |  |  | 4.6 |
| Table 14 shows a breakout of CRAFFT scores by respondent's age. A Pearson's Chi-Square test indicated significant differences exist among age groups for the scores ( $\mathrm{p}<.001$ ). The prevalence of a score of two or greater was higher for older respondents. |  |  |  |  |  |  |  |  |
| CRAFFT Score | Age of respondent (number ( n ) of respondents in each group) |  |  |  |  |  |  |  |
|  | $\begin{gathered} 12 \\ (\mathrm{n}=4,906) \end{gathered}$ | $\begin{gathered} 13 \\ (n=14,035) \end{gathered}$ | $\begin{gathered} 14 \\ (n=14,279) \end{gathered}$ | $\begin{gathered} 15 \\ (\mathrm{n}=11,299) \end{gathered}$ | $\begin{gathered} 16 \\ (\mathrm{n}=10,146) \end{gathered}$ | $\begin{gathered} 17 \\ (n=7,145) \end{gathered}$ | $\begin{array}{r} 18+ \\ (n=4,1 \end{array}$ |  |
| 0 | 83.7 | 80.6 | 75.3 | 70.1 | 64.9 | 62.4 | 59.1 |  |
| 1 | 12.7 | 13.9 | 15.5 | 16.0 | 17.3 | 16.4 | 16.8 |  |
| 2+ | 3.6 | 5.5 | 9.2 | 13.9 | 17.8 | 21.2 | 24.1 |  |

Table 15 presents the CRAFFT results by race and ethnicity for respondents age 12 and older. Race and ethnicity data were collapsed into four categories to facilitate statistical tests of differences among categories. The construction of these categories is explained in the Data section of this monograph (see Tables 27 and 28).

A Pearson's Chi-Square test of differences indicated significant differences among the four race/ethnicity categories ( $\mathrm{p}<.001$ ). Z-tests indicated that fewer Caucasian, African-American, and Other students scored a two or greater on the CRAFFT than Hispanic students ( $\mathrm{p}<.001$ ). Further, the prevalence of a score of two or greater was lower for Other Students than for African-American students ( $\mathrm{p}<.001$ ).

Table 15. CRAFFT scores of respondents, aged 12 or older (percentages by race and ethnic group)

|  | Race or ethnicity (number ( n ) of respondents in each group) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| CRAFFT Score | White or <br> Caucasian <br> $(\mathrm{n}=46,093)$ | Black or <br> African- <br> American <br> $(\mathrm{n}=3,766)$ | Hispanic <br> (any race) <br> $(\mathrm{n}=8,594)$ | Other <br> $(\mathrm{n}=7,455)$ |
| 0 | 72.9 | 68.2 | 68.8 | 73.1 |
| 1 | 15.0 | 19.4 | 16.7 | 15.3 |
| $2+$ | 12.1 | 12.4 | 14.5 | 11.6 |

Table 16 shows the CRAFFT results by gender of respondent for respondents ages 12 and older. A Pearson's Chi-Square test indicated significant differences between genders ( $\mathrm{p}<.001$ ). Female students were more likely than male students to score a two or greater on the CRAFFT.

Table 16. CRAFFT scores respondents, aged 12 or older (percentages by gender)

|  | Gender (number $(\mathrm{n})$ of respondents) |  |
| :---: | :---: | :---: |
| CRAFFT Score | Male <br> $(\mathrm{n}=32,133)$ | Female <br> $(\mathrm{n}=33,853)$ |
| 0 | 75.4 | 69.0 |
| 1 | 13.6 | 17.3 |
| $2+$ | 11.0 | 13.7 |

## Mental Health

Prior research has demonstrated robust relationships between adolescent depression, suicidal behavior, and substance abuse (Esposito-Smythers \& Spirito, 2004; Hallfors, et al., 2004; Light, Grube, Madden \& Gover, 2003). As a result, the State is trying to better understand the prevalence of mental health concerns among Indiana's youth. Mental health was measured for the past year ( 12 months) with survey items that asked about "feeling sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities," "serious consideration of attempting suicide," and "making a plan about how you would attempt suicide."

The percentages of respondents who reported mental health concerns are shown in Table 17. YRBS national prevalence rates for Grades 9 to 12 are provided for comparison. Statistically significant differences between Indiana prevalence rates and national prevalence rates ( $\mathrm{p}<.05$ ) are highlighted in yellow. Because the national prevalence rates were collected one year prior to the Indiana Youth Survey data collection, significant caution should be used in interpreting any differences in this section.

The following differences are observed: the prevalence rates for having felt sad or hopeless for two or more weeks in a row in the past year were higher for Indiana youth in 9th through 12th grades than for U.S. youth in the same grades. The prevalence rate for having considered attempting suicide was higher for Indiana students in 9th and 10th grades than for U.S. students in the same grades. Finally, the prevalence rates for having made a plan about attempting suicide were not different between Indiana youth and U.S. youth. National data are not available for students in 6th through 8th grades.

Table 17. Mental health (percentages)

|  |  | Grade |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| Felt sad or hopeless for 2+ weeks in a row | IN | 28.9 | 30.5 | 33.5 | 35.2 | 39.2 | 36.6 | 36.0 |
|  | US | -- | -- | -- | 29.8 | 32.5 | 32.5 | 31.0 |
| Considered attempting suicide | IN | 11.8 | 15.2 | 17.6 | 18.0 | 19.3 | 17.9 | 17.3 |
|  | US | -- | -- | -- | 16.3 | 17.3 | 17.5 | 17.4 |
| Made a plan about attempting suicide | IN | 9.0 | 11.7 | 13.3 | 13.1 | 14.3 | 13.1 | 12.2 |
|  | US | -- | -- | -- | 12.8 | 14.1 | 14.2 | 12.9 |

Notes.
IN = 2020 Indiana Youth Survey (Gassman et al., 2020).
US = 2019 Youth Risk Behavior Survey (YRBS) (Underwood et al., 2020).

As gambling options and venues in the state expand, monitoring the prevalence of gambling activities among children and adolescents is increasingly important for planning prevention efforts. All gambling-related questions asked about behavior and experiences in the past year. This year, the Indiana Youth Survey revised the different ways in which students can report gambling to account for the multiple permutations of online and digital gambling that have emerged.

## Gambling Behavior

The first question focused on gambling behavior itself: "During the past 12 months, how often have you gambled (bet money or valuables on an uncertain outcome) in the following ways?" The forms of gambling that students could select are listed in Table 18. The prevalence of many types of gambling was either higher in younger grades than in older grades or was relatively flat across grade levels. An exception to this pattern, which was also observed in 2018, was the sharp increase in lottery gambling among students in 12th grade, who are more likely to be legally able to purchase lottery tickets. Further, although this year's survey included different
categories than in the past, the prevalence rates for many forms of gambling were higher for students in 8th grade than for students in any other grade; this pattern had been observed in 2016 through 2018 as well. Finally, with the exception of students in 12th grade, for whom the lottery was the most frequent gambling behavior, students uniformly reported gambling on video games (via skins or loot boxes) more often than any other gambling behavior; this prevalence rate approached one quarter of students in 8th grade.

Table 18. Gambling behavior by Indiana adolescents in the past year (percentages)

|  | Grade |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| Casino | 0.6 | 0.8 | 0.9 | 0.9 | 1.2 | 1.6 |
| Lottery | 13.7 | 15.1 | 13.3 | 11.6 | 10.9 | 19.5 |
| Horse track betting | 1.9 | 2.5 | 2.2 | 2.6 | 1.9 | 2.7 |
| Card games | 13.1 | 14.1 | 12.6 | 11.6 | 10.5 | 10.8 |
| Pools (e.g., March | 6.0 | 7.4 | 7.7 | 7.3 | 7.1 | 7.8 |
| Madness) | 6.2 | 7.0 | 6.8 | 6.1 | 6.0 | 6.5 |
| Fantasy sports | 21.3 | 23.3 | 19.8 | 18.7 | 16.2 | 15.5 |
| Video game (e.g., skins, | 6.9 | 7.5 | 6.6 | 5.6 | 5.1 | 4.8 |
| loot boxes) | 3.0 | 3.2 | 2.7 | 2.6 | 2.3 | 2.6 |
| Other sports betting | 9.5 | 10.0 | 7.5 | 7.2 | 6.2 | 5.2 |
| Online gambling (e.g., poker, <br> casino-style games) | 7.3 | 7.5 | 6.6 | 6.3 | 6.0 | 6.4 |
| Competitive video gaming <br> (Esports) | 5.8 | 6.0 | 4.3 | 4.2 | 2.8 | 3.2 |
| Charitable gambling |  |  |  |  |  |  |
| Gambled in other ways |  |  |  |  |  |  |

It is possible to determine the overall prevalence of gambling behavior using the responses to this question. A student who reported having bet/gambled money in at least one way during the past 12 months was considered to have gambled. Prevalence rates of past-year gambling among 7th- to 12th-grade students ranged from a low of $32.7 \%$ (11th grade) to a high of $40.4 \%$ (8th grade).

Figure 16. Prevalence rates of any gambling behavior, grades 7 to 12 , expressed as a percentage

## Reasons for Gambling

The second question asked, "When you gamble, what is your most common reason for gambling?" Students were presented with nine possible reasons, as indicated in Table 19. Among those who gambled, the most common reason was that it was a source of entertainment, followed distantly by a source of excitement, and a way to socialize with friends.

Table 19. Most common reason for gambling ( $n=24,127$ )

|  | Grade |  |  |  |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ |  |  |  |  |  |  | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| A source of entertainment | 26.9 | 30.1 | 30.2 | 32.4 | 32.2 | 36.8 |  |  |  |  |  |  |
| A source of excitement | 8.3 | 8.4 | 8.3 | 8.3 | 7.5 | 7.2 |  |  |  |  |  |  |
| A way to socialize with friends | 6.1 | 5.9 | 6.3 | 6.4 | 7.6 | 5.6 |  |  |  |  |  |  |
| A way to get rich | 2.1 | 2.4 | 2.4 | 2.5 | 2.6 | 2.9 |  |  |  |  |  |  |
| Money for paying bills | 0.2 | 0.5 | 0.4 | 0.4 | 0.4 | 1.1 |  |  |  |  |  |  |
| Money for supporting <br> charities | 1.7 | 1.4 | 1.7 | 1.6 | 2.4 | 2.0 |  |  |  |  |  |  |
| A hobby | 2.0 | 2.0 | 1.9 | 2.8 | 2.7 | 3.0 |  |  |  |  |  |  |
| An escape from everyday | 0.7 | 0.7 | 0.6 | 0.6 | 0.6 | 0.6 |  |  |  |  |  |  |
| problems | 5.5 | 4.7 | 4.6 | 4.3 | 3.7 | 3.6 |  |  |  |  |  |  |
| Other |  |  |  |  |  |  |  |  |  |  |  |  |

## Consequences of Gambling

The third question about gambling asked: "How often have you experienced the following consequences due to your gambling?" The types of consequences listed in the survey are indicated in Table 20.

The prevalence of students reporting experiencing different consequences declined as grade level increased, from 7th through 12th, with the exception of money issues, which became slightly more common as grade level increased.

Table 20. Consequences of gambling by Indiana adolescents in the past year ( $n=24,127$ )

|  | Grade |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| Not sleeping | 11.0 | 9.5 | 8.6 | 8.1 | 6.2 | 5.8 |
| Poor hygiene | 3.2 | 2.7 | 2.5 | 2.2 | 1.8 | 1.7 |
| Loss of friendships | 8.0 | 6.8 | 6.3 | 5.2 | 4.0 | 3.4 |
| Family issues | 5.9 | 5.8 | 5.0 | 4.6 | 3.7 | 3.2 |
| School problems | 8.7 | 7.7 | 6.2 | 5.3 | 4.6 | 3.4 |
| Money issues | 4.9 | 5.5 | 5.6 | 5.6 | 5.6 | 6.3 |
| Felt guilty or bad | 11.4 | 10.6 | 9.1 | 8.1 | 6.4 | 5.8 |
| Depression | 7.8 | 6.8 | 6.0 | 5.5 | 4.4 | 4.4 |

## Parental Deployment

Research has demonstrated that parental military deployment places youth at increased risk for substance abuse (Fitzsimons \& Krause-Parello, 2009) and mental health issues (Reed, Bell \& Edwards, 2011). The percentages of respondents who reported parental deployment are shown in Table 21.

Table 21. Parental deployment

|  | Grade |  |  |  |  |  |  |  |  |
| ---: | :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  |  | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ |
| Parents served in a war zone | $\%$ | 11.7 | 10.6 | 9.8 | 9.3 | 8.0 | 6.9 | 5.6 |  |
|  | N | 14,066 | 15,151 | 17,078 | 11,894 | 12,012 | 8,258 | 6,774 |  |

The percentages of youth who reported that one or more of their parents served in the military and in a war zone were highest in Grades 6 and 7 and declined steadily to Grade 12.

## METHODOLOGY

The methodological history of the Indiana Youth Survey can be read in previous reports. All reports published since 1996 can be found at: www.INYS.indiana.edu.

Sample

The sampling frame of the Indiana Youth Survey is the universe of all Indiana school corporations and dioceses. Prevention Insights (PI) obtained from the Indiana Department of Education a list of names and addresses of principals and superintendents in all 1,434 public and nonpublic schools that serve 6 th- through 12th-grade students in Indiana. In May 2019, invitation letters were sent to all school superintendents and principals. The invitation letters included information on:

- registration;
- sample survey forms;
- parental consent;
- frequently asked questions;
- administering a paper-and-pencil questionnaire or an online survey; and
- adding additional questions.

The corporations and dioceses had at least four months to register for the survey. In order to participate, a school or corporation was required to:

- identify a designated coordinator at each public school corporation or multiple coordinators if schools are scattered in several locations;
- describe its policy on parental consent;
- identify its spring break period;
- identify desired survey administration date(s) ;
- identify whether the paper form or the online survey would be administered and;
- convey the number of students scheduled to participate in each grade level.

Schools were responsible for obtaining parental consent for students to participate in the Indiana Youth Survey. Information about whether a particular school or corporation has participated in any year may be released upon request from the community. However, school- or corporation-level results from the survey are released to third parties only with the explicit written permission of the school or corporation's survey coordinator or other appropriate authority.

## Participation

Since 1993, participation in the Indiana Youth Survey has been open to all Indiana school corporations, public and nonpublic. The number of usable surveys, shown in Table 22, has fluctuated from year to year. While it is not possible to explain all of the fluctuation, the causes are likely to include:

- The exclusion from participation of fifth-grade students since 1994;
- The participation of some schools on biennial and triennial bases;
- The arbitrary selection by some schools of the grade levels surveyed;
- Variation in the interpretation of parental consent requirements and;
- The growing length of the Indiana Youth Survey instrument.

This year, administration of the survey was unexpectedly cut short due to the coronavirus disease 2019 (COVID-19) pandemic. Schools in Indiana moved to online-only education effective March 19, 2020, by order of the Governor. In consultation with the Indiana Division of Mental Health and Addiction, the decision was made to terminate data collection on March 20, 2020. The factors involved in this decision included, but were not limited to:

- Concern about the ability of students to privately and confidentially complete the survey in their home environments;
- Concern about the impact of the survey on the already increasing complexity of students' and families' lives in adjusting to a "new normal," and;
- Potential issues related to data quality that would emerge due to bias introduced by a major historical event (e.g., behaviors and attitudes might be markedly different in the early weeks of a pandemic).

Table 22. Number of usable surveys (1993-2020)

| Year | Usable Surveys | Year | Usable Surveys | Year | Usable Surveys |
| :---: | ---: | :---: | ---: | :---: | ---: |
| 1993 | 90,586 | 2002 | 77,068 | 2011 | 152,678 |
| 1994 | 81,732 | 2003 | 141,342 | 2012 | 127,061 |
| 1995 | 63,631 | 2004 | 91,577 | 2013 | 117,554 |
| 1996 | 36,586 | 2005 | 136,782 | 2014 | 119,147 |
| 1997 | 72,571 | 2006 | 120,914 | 2015 | 111,585 |
| 1998 | 44,232 | 2007 | 158,632 | 2016 | 107,801 |
| 1999 | 81,685 | 2008 | 152,732 | 2017 | 126,269 |
| 2000 | 72,523 | 2009 | 182,496 | 2018 | 112,240 |
| 2001 | 89,861 | 2010 | 169,059 | 2020 | 85,827 |

The rates of participation for school corporations, schools, and students statewide, and for each FSSA Planning Region, are shown in Table 23. 'Rate of participation’ is the proportion of corporations, schools and students scheduled to participate in the survey out of the entire student population. There is wide variation in rates of participation across regions. Region 8 had the highest rates of participation among corporations ( $50.0 \%$ ), schools ( $43.5 \%$ ), and students ( $27.5 \%$ ). Region 6 had the lowest rate of participation among corporations ( $9.4 \%$ ), Region 7 had the lowest rate of participation among schools ( $9.5 \%$ ), and Region 5 had the lowest rate of participation among students (6.7\%).

Table 23. Participation rates for students, schools, and corporations by region

|  | State | Region 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Students |  |  |  |  |  |  |  |  |  |  |  |

[^3]
## Administration of the Survey

Two weeks before the designated survey administration date, PI mailed a packet to participant schools using the paper questionnaire that contained:

- the machine-readable survey forms;
- return shipping labels through the FedEx Package Return Program;
- written instructions for administering the survey, and;
- a link to the survey administration training video (6 minutes 20 seconds) produced by the PI.

Participant schools using the online questionnaires were e-mailed the written instructions for administering the survey and a link to the survey administration training video.

The training video describes and demonstrates for school personnel each step of administering the survey to a group of students. The video and the written instructions were provided to improve the consistency of cross-site survey administration. The video is also available for download at www.INYS.indiana.edu.

The written or video documentation included the following instructions for school personnel who administered the survey:

1. Inform students that:

- their participation in the survey is completely voluntary,
- the results are confidential, and
- there are no penalties for deciding not to participate or for not responding to specific items.

2. Students will need about 30 minutes to complete the survey.
3. Remain seated while students fill out the survey.
4. Instruct the students that, when they complete the paper survey, they should place their survey forms into the single envelope that PI has provided and which is labeled with a school and classroom code.
5. For the online survey, set up the computer lab as if you were administering the ISTEP+ test.
6. For the online survey, write the following web address and special School Code and Passcode on the blackboard or another visible place.

Website: www.INYS.indiana.edu

| School Name | School Code (8 digits) | Passcode (4 digits) |
| :---: | :---: | :---: |
| School | 05050001 | 8371 |
| School | 05050002 | 8371 |
| School | 05050003 | 8371 |

7. Make sure that all students have access to the survey website.

Indiana Youth Survey staff members are available to provide support and answer questions through a toll-free 800 telephone number from Monday through Friday. Schools initially had a ten-week window to administer the surveys between January 27 and April 3, 2020 and were asked to return the paper questionnaires immediately
to PI. However, due to COVID-19, the administration of the 2020 INYS was terminated on March 20, as described previously.

Survey Instrument

## Origin and Relevance of the Questions

Year-to-year changes in the Indiana Youth Survey instrument are documented in the reports corresponding to the years in which they occur. In general, survey items have been derived from a variety of sources for purposes of comparability with national and other state survey data. All items use multiple choice response options.

The mental health items pertaining to feeling sad and hopeless and to suicidal behaviors have their origin in the YRBS (CDC, 2014). The item on parental service in the military was modified from the Behavioral Risk Factor Surveillance System (CDC, 2011).

Alcohol and drug use prevalence items were based on those in the MTF (Johnston, Bachman, \& O'Malley, 1989), conducted by the University of Michigan. The Indiana Youth Survey asked respondents in Grades 7 to 12 about their use of 17 different types of drugs or drug classifications and one fake drug, Vivoxiline, which was added to facilitate the error-check protocol. Students in 6th grade were asked about their use of six different types of drugs or drug classifications and the fake drug Vivoxiline. In some instances, examples and/or slang descriptions appeared in parentheses next to the name of the drug or drug classification. The purpose of this was to elicit responses about the use of a single substance that might be a common ingredient in multiple products (i.e., alcohol in beer, wine, and liquor) or that might have multiple common names, some of them distributed geographically within the state. Other examples include "MDMA," "Molly" and "X" for ecstasy, and "meth," "crank," and "crystal" for methamphetamine.

Prevalence of alcohol, tobacco, and a variety of other drug use is a primary focus of the Indiana Youth Survey. Prevalence refers to the rate of total cases of a condition in a population. For the Indiana Youth Survey, three types of prevalence data were collected for ATOD use. Definitions for the various prevalence-of-use measures used in this report are listed below.

Lifetime prevalence: the Indiana Youth Survey asked the question 'At what age did you first use....' for each of the seventeen (7th to 12th grade) or six (6th grade) substances in the survey. One response option for each substance was 'Never Used.' Lifetime prevalence for each substance can be calculated as binary data, with all individuals reporting any age of initiation effectively
reporting lifetime use of that substance, and those reporting 'Never Used’ effectively reporting no lifetime use.

Current use or monthly prevalence: the percentage of respondents who reported using a particular substance at least once in the 30 days prior to the administration of the survey.

Binge drinking prevalence: the percentage of respondents who reported drinking at least five alcoholic drinks in a row in the two weeks prior to administration of the survey.

The item set for age of first use is similar to that in the National Household Survey on Drug Abuse. However, in the Indiana Youth Survey, these items are closed ended. The 'access to alcohol' items have origins in the YRBS.

The 'perceived risk of harm' items have origins in both MTF and the National Survey on Drug Use and Health. They are performance measurement requirements for SAMHSA Drug-Free Communities (DFC) Support Program grantees, with some of them comprising a Communities that Care (CTC) risk factor scale. The 'perceived parental disapproval' and 'perceived peer disapproval' items also are required by DFC grantees. Some of the parental disapproval items make up two separate CTC risk factor scales. Questions on perceived peer use (e.g., prevalence of substance use among peers, or "normative beliefs") were added in 2018 based on the 2015 Positive Community Norms Student Survey (The Montana Institute, 2015). However, due to concerns about interpretability of results, those questions were modified by PI for clarity in 2020 .

Other items from the CTC Survey (SAMHSA, 2009) belong to one of four categories of influence: Family, Community, Peer-Individual, and School. An example of an item from the Family category is, "How wrong do your parents feel it would be for you to drink beer, wine or hard liquor (vodka, whiskey, or gin) regularly (at least once or twice each month)?" An item from the Community category is, "How easy is it to get cigarettes, smokeless tobacco, cigars, or other tobacco products?" An item from the Peer-Individual category is, "What are the chances you would be seen as cool if you smoked marijuana?" An example from the School category is, "How important do you think the things you learn in school are going to be for you later in life?"

The Indiana Youth Survey originally added gambling items in 2005. Those core items were taken from the Minnesota Student Survey (Stinchfield, Kushner, \& Winters, 2005; Winters \& Anderson, 2000). In 2015, the Indiana Problem Gambling Awareness Program provided updated questions that more specifically addressed the needs of problem gambling prevention in Indiana. Then, in 2020, additional changes were made based on research by Losch et al. (2013).

PI entered the Indiana Youth Survey data from the paper questionnaires in-house using Pearson optical scanner equipment. The data were cleaned using multiple criteria. A survey could be eliminated from the analysis for either eight (6th grade) or nine (7th through 12th grades) reasons, which are described on the subsequent pages. Tables 24 and 25 show the frequency and proportion of surveys eliminated for these reasons.

Table 24. Reasons for excluding respondents from the analysis for 6th grade students

|  | Paper |  | Online |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% |
| Rejected questionnaires |  |  |  |  |  |  |
| Blank surveys/Refused to participate | 26 | 1.5 | 129 | 1.0 | 155 | 1.0 |
| Not truthfully at all response | 5 | 0.3 | 100 | 0.8 | 105 | 0.7 |
| Indicated fictitious drug (vivo) use | 6 | 0.3 | 77 | 0.6 | 83 | 0.6 |
| Rejected by gender check | 69 | 3.9 | 47 | 0.4 | 116 | 0.8 |
| Rejected by grade check | 20 | 1.1 | 108 | 0.8 | 128 | 0.9 |
| Rejected by age and onset age check | 1 | 0.1 | 10 | 0.1 | 11 | 0.1 |
| Rejected by consistent use check | 0 | 0.0 | 2 | 0.0 | 2 | 0.0 |
| Rejected by dose check | 0 | 0.0 | 0 | 0.0 | 0 | 0.0 |
| Total number of usable questionnaires | 1,627 | 92.8 | 12,602 | 96.4 | 14,229 | 96.0 |
| Total | 1,754 | 100.0 | 13,075 | 100.0 | 14,829 | 100.0 |

Table 25. Reasons for excluding respondents from the analysis for 7th - 12th grade students

|  | Paper |  | Online |  | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% |
| Rejected questionnaires |  |  |  |  |  |  |
| Blank surveys/Refused to participate | 249 | 4.2 | 368 | 0.5 | 617 | 0.8 |
| Not truthfully at all response | 106 | 1.8 | 1,795 | 2.6 | 1,901 | 2.5 |
| Indicated fictitious drug (vivo) use | 69 | 1.2 | 597 | 0.9 | 666 | 0.9 |
| Rejected by gender check | 278 | 4.7 | 343 | 0.5 | 621 | 0.8 |
| Rejected by grade check | 47 | 0.8 | 384 | 0.5 | 431 | 0.6 |
| Rejected by grade and age check | 3 | 0.1 | 69 | 0.1 | 72 | 0.1 |
| Rejected by age and onset age check | 4 | 0.1 | 42 | 0.1 | 46 | 0.1 |
| Rejected by consistent use check | 0 | 0.0 | 3 | 0.0 | 3 | 0.0 |
| Rejected by dose check | 1 | 0.0 | 9 | 0.0 | 10 | 0.0 |
| Total number of usable questionnaires | 5,201 | 87.3 | 66,397 | 94.8 | 71,598 | 94.3 |
| Total | 5,958 | 100.0 | 70,007 | 100.0 | 75,965 | 100.0 |

The following criteria were used to clean the 2020 Indiana Youth Survey. As noted, eight conditions were used to clean the 6th grade data, and a ninth condition (Implausible Age and Grade Combination) was used to clean the 7th to 12th grade survey.

## Condition 1: Blank Surveys

- 6th Grade Instrument: There were a total of 80 questions on the 6 th grade instrument, including five questions that asked about students' demographic information. Cases where students provided five or fewer responses were eliminated from the data analyses.
- 7th to 12th Grade Instrument: There were a total of 190 questions on the 7th to 12th grade instrument, including five questions that ask about students' demographic information. Cases where students provided five or fewer responses were eliminated from the data analyses.

## Condition 2: Truthfulness

- The final item of both survey instruments asked students, "How truthfully have you answered these questions?" The response options for this question were, (a) Not truthfully at all; (b) Somewhat truthfully, and (c) Completely truthfully. Cases where students responded 'Not truthfully at all' were eliminated from the analyses. Additional details about the regional distribution of responses to this question are located in Table 26. Variation ranging from $1.7 \%$ to $2.8 \%$ was observed cross-regionally in terms of students who responded that they did not complete the instrument truthfully at all.

Table 26. Response to item on truthful completion of the Indiana Youth Survey by region

| Region | No Answer |  | Not Truthfully at all |  | Somewhat Truthfully |  | Completely Truthfully |  | Total N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | \% | N | \% | N | \% | N | \% |  |
| Region 1 | 1,790 | 18.2 | 191 | 1.9 | 1,282 | 13.0 | 6,595 | 66.9 | 9,858 |
| Region 2 | 2,629 | 21.0 | 321 | 2.6 | 1,671 | 13.3 | 7,917 | 63.1 | 12,538 |
| Region 3 | 1,859 | 20.8 | 254 | 2.8 | 1,399 | 15.6 | 5,436 | 60.8 | 8,948 |
| Region 4 | 1,073 | 12.8 | 150 | 1.8 | 1,064 | 12.7 | 6,104 | 72.7 | 8,391 |
| Region 5 | 1,182 | 19.6 | 105 | 1.7 | 738 | 12.2 | 4,018 | 66.5 | 6,043 |
| Region 6 | 761 | 18.0 | 82 | 1.9 | 530 | 12.6 | 2,845 | 67.4 | 4,218 |
| Region 7 | 1,522 | 20.5 | 163 | 2.2 | 1,124 | 15.1 | 4,633 | 62.3 | 7,442 |
| Region 8 | 1,754 | 14.1 | 257 | 2.1 | 1,582 | 12.7 | 8,889 | 71.2 | 12,482 |
| Region 9 | 2,769 | 17.2 | 364 | 2.3 | 2,075 | 12.9 | 10,868 | 67.6 | 16,076 |
| Region 10 | 657 | 13.7 | 123 | 2.6 | 702 | 14.6 | 3,316 | 69.1 | 4,798 |
| Total | 15,996 | 17.6 | 2010 | 2.2 | 12,167 | 13.4 | 60,621 | 66.8 | 90,794 |

Condition 3: Vivoxiline (Vivo) Use

- There were two items on both survey instruments that asked about "Vivoxiline (Vivo) use": during the past 30 days and age of first use. The drug is fictitious and was created to check the validity of students' responses. Cases where students reported any use were eliminated from the data analyses.

Condition 4: Missing Gender Information

- Cases where students did not provide an answer to the gender question were eliminated from the data analyses.

Condition 5: Missing or Invalid Grade Information

- 6th Grade Instrument: Cases where students reported being in 5th, 7th, or 8th grade were eliminated from the data analyses, as were cases where students did not provide an answer to the grade question.
- 7th to 12th Grade Instrument: Cases where students reported being in 6th grade were eliminated from the data analyses, as were cases where students did not provide an answer to the grade question.

Condition 6: Implausible Age and Grade Combination

- 7th to 12th Grade Instrument (Only): Cases where a student's combination of grade and age were implausible (e.g., a 10-year-old in the 12th grade) were eliminated. The following ranges were considered plausible:
- 7th grade: 11 through 15 years old;
- 8th grade: 12 through 16 years old;
- 9th grade: 13 through 17 years old;
- 10th grade: 14 through 18 years old;
- 11th grade: 15 years or older;
- 12th grade: 16 years or older.

## Condition 7: Implausible Age and Onset Age Combination

- If a student indicated an age of first use for any substance that was higher than the student's current age, that case was eliminated from the analyses.

Condition 8: Substance Use Inconsistencies

- 6th Grade Instrument: The consistency of responses between 30-day use and age of first use of substances was checked. There were six substances that were queried for both 30-day use and age of first use: cigarettes, alcohol, marijuana, inhalants, prescription drugs, and other illegal drugs. Responses were considered inconsistent if students answered "never" to age of first time use of a substance, but indicated use of the substance in the past month. Surveys with four or more inconsistent responses were eliminated from the data analyses. Surveys with fewer than four inconsistencies were kept in the dataset but the inconsistent responses were set to missing.
- 7th to 12 th Grade Instrument: The consistency of responses between 30-day use and age of first use of substances was checked. There were seven substances that were queried for both 30-day use and age of first use: cigarettes, electronic vapor products, alcohol, marijuana, inhalants, prescription drugs, and a fictitious drug. Responses were considered inconsistent if students answered "never" to age of first time use of a substance, but indicated use of the substance in the past month.
In addition, the consistency of responses among binge drinking, 30-day use, and age of first use of alcohol was checked. If a student reported binge drinking in the past two weeks, but reported " 0 occasions" of 30-day alcohol use or responded "never" to age of first use of alcohol, the response was considered inconsistent.
Surveys with 7 or more inconsistent responses were eliminated from the data analysis. Surveys with fewer than 7 inconsistencies were kept in the dataset but the inconsistent responses were set to missing.

Condition 9: Pharmacological Implausibility

- 6th Grade Instrument: The over-reporting of substance use was examined through patterns of responses that are pharmacologically implausible. Pastmonth use of the following substances was examined: alcohol, marijuana, inhalants, prescription drugs, and other illegal drugs (cigarettes were not included). Cases where students reported using a substance " 40 times or more" for three or more substances were eliminated from data analyses.
- 7th to 12th Grade Instrument: The over-reporting of substance use was examined through patterns of responses that are pharmacologically implausible. Past-month use of ten substances was examined (cigarettes, smokeless tobacco, cigars, pipe, and electronic cigarettes were not included). Cases where students reported using a substance " 40 times or more" for five or more substances were eliminated from data analyses. Further, cases where the summed score from all ten substance use questions exceeded 28 were not included in the data analyses (where $0=$ never; $1=1-5$ times; $2=6-19$ times; $3=20-39$ times; $4=40+$ times).

## Demographics

Respondent demographics are shown in Table 27 according to gender, race/ethnicity and grade level. Respondents were asked separate questions about race and Hispanic ethnicity. To facilitate statistical tests of differences among categories, we combined these results to create four categories: Non-Hispanic White or Caucasian, NonHispanic Black or African-American, Hispanic Ethnicity (any race), and Other. "Other" included all other respondents, including: (1) all non-Hispanic non-Whites and non-Blacks, including the response categories of Asian, Native Hawaiian or Other Pacific Islander, American Indian or Alaska Native, More than one race, Race not known or other; and (2) respondents who indicated non-Hispanic ethnicity but
did not respond to the question on race (see Table 28).
Table 27. Demographic characteristics of the participants

| Gender | $\mathbf{N}$ | $\%$ |
| :---: | ---: | ---: |
| Male |  |  |
| Female | 42,212 | 49.2 |
| Grade | 43,615 |  |
| 6 | 14,229 | 16.6 |
| 7 | 15,275 | 17.8 |
| 8 | 17,210 | 20.1 |
| 9 | 11,951 | 13.9 |
| 10 | 12,071 | 14.1 |
| 11 | 8,292 | 9.7 |
| 12 | 6,799 | 7.9 |
| Race/Ethnicity | 58,867 | 68.6 |
| White | 5,211 | 6.1 |
| Black | 11,221 | 13.1 |
| Hispanic | 10,386 | 12.1 |
| Other (see Table 28) | 142 | 0.2 |
| No answer |  |  |

Table 28. Components of race/ethnicity category "Other"

| Race | Ethnicity |  |
| :--- | ---: | ---: |
|  | Non-Hispanic | No Answer |
| White | (see Table 27) | 1,144 |
| Black or African-American | (see Table 27) | 148 |
| Asian | 2,312 | 61 |
| Native Hawaiian or Other Pacific Islander | 127 | 1 |
| American Indian or Alaskan Native | 439 | 9 |
| More than one race | 4,558 | 196 |
| Race not known or other | 855 | 71 |
| No answer | 465 | (see Table 27) |

## Reliability

Reliability is an estimate of how consistently survey items measure the same concept each time they are administered under the same conditions and with the same subjects. Internal reliability coefficients describe the consistency of results across sets of items (Fink, 1993). Internal reliability coefficients (i.e. Cronbach's alpha) based on the average correlation among item sets are shown in Tables 29 and 30 . Alpha coefficients range in value from 0 to 1 . The higher the score is, the more reliable the item sets are. Nunnaly (1978) has indicated 0.7 to be an acceptable reliability coefficient, and many researchers require at least 0.8 for a "good scale." Based on these criteria, the internal reliability of the risk and protective factor item
sets contained in the Indiana Youth Survey generally ranges from acceptable to excellent. Two scales on the 6th grade survey had slightly lower than acceptable internal reliability ratings (between 690 and .700 ), including school opportunities for prosocial involvement and interaction with prosocial peers. One additional scale had a lower reliability (family opportunities for prosocial involvement; .638). Further, two scales on the 7th to 12th grade survey, low school commitment and early initiation of drug use, had lower than acceptable internal reliability (values between .650 and .700). This indicates that the item sets are generally consistent measures of the risk and protective factor concepts in the Indiana Youth Survey.

Table 29. Internal reliability of item sets for the 6th grade survey

| Item Set | Example Question Wording | Number of Items | Cronbach's Alpha |
| :---: | :---: | :---: | :---: |
| Perceived Peer Disapproval | How do you think your close friends feel (or would feel) about you doing each of the following things? | 4 | . 839 |
| Poor Family Management | The rules in my family are clear. | 8 | . 765 |
| Family Conflict | We argue about the same things in my family over and over. | 3 | . 781 |
| Parental Attitudes Favorable to Drug Use | How wrong do your parents feel it would be for you to... | 3 | . 733 |
| Perceived Risk of Drugs | How much do you think people risk harming themselves (physically or in other ways) if they... | 6 | . 916 |
| Community Rewards for Proso-cial Involvement | My neighbors notice when I am doing a good job and let me know. | 3 | . 892 |
| Family Opportunities for Proso-cial Involvement | My parents ask me what I think before most family decisions affecting me are made. | 3 | . 638 |
| Family Rewards for Prosocial Involvement | Do you enjoy spending time with your mother? | 4 | . 722 |
| School Opportunities for Prosocial Involvement | In my school, students have lots of chances to help decide things like class activ-ities and rules. | 5 | . 693 |
| School Rewards for Prosocial Involvement | My teacher(s) notices when I am doing a good job and lets me know about it. | 4 | . 748 |
| Interaction with Prosocial Peers | Think of your four best four friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have ... | 5 | . 699 |

Table 30. Internal reliability of item sets for the 7th -12th grade survey

| Item Set | Example Question Wording | Number of Items | Cronbach's Alpha |
| :---: | :---: | :---: | :---: |
| Perceived Peer Disapproval | How do you think your close friends feel (or would feel) about you doing each of the following things? | 4 | . 868 |
| Community Law and Norms Fa-vorable to Drug Use | These questions ask about the neighborhood and community where you live. | 7 | . 879 |
| Perceived Availability of Drugs | How easy would it be for you to get...? | 4 | . 860 |
| Poor Family Management | The rules in my family are clear. | 8 | . 852 |
| Family Conflict | We argue about the same things in my family over and over. | 3 | . 862 |
| Parental Attitudes Favorable to Drug Use | How wrong do your parents feel it would be for you to... | 3 | . 805 |
| Parental Attitudes Favorable to Anti-social Behavior | How wrong do your parents feel it would be for you to... | 3 | . 781 |
| Low School Commitment | Now thinking back over the past year in school, how often did you... | 3 | . 651 |
| Early Initiation of Drug Use ${ }^{\dagger}$ | If you have ever used these drugs, at what age did you first use them? | 3 | . 685 |
| Peer Attitudes Favorable to Drug Use | How wrong do you think it is for someone your age to...? | 4 | . 831 |
| Perceived Risk of Drugs | How much do you think people risk harming themselves (physically or in other ways) if they... | 6 | . 911 |
| Community Rewards for Proso-cial Involvement | My neighbors notice when I am doing a good job and let me know. | 3 | . 936 |
| Family Opportunities for Proso-cial Involvement | My parents ask me what I think before most family decisions affecting me are made. | 3 | . 760 |
| Family Rewards for Prosocial Involvement | Do you enjoy spending time with your mother? | 4 | . 796 |
| School Opportunities for Prosocial Involvement | In my school, students have lots of chances to help decide things like class activ-ities and rules. | 5 | . 781 |
| School Rewards for Prosocial Involvement | My teacher(s) notices when I am doing a good job and lets me know about it. | 4 | . 811 |
| Interaction with Prosocial Peers | Think of your four best four friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have ... | 5 | . 788 |

Notes. ${ }^{\dagger}$ The scale is missing one item out of four items from the original CTC scale.

## Validity

The validity of a survey is the extent to which it measures what its designers intend it to measure (Fink, 1993). The Indiana Youth Survey is intended to measure the reported prevalence of substance use, the consequences of use, perceptions of peer approval of substance use, perceptions of personal safety, prevalence of gambling, and other concepts. The Indiana Youth Survey measures these concepts among children and adolescents in Grades 6 through 12 located in schools across Indiana at a given point in time. Historically, the Indiana Youth Survey has used a nonrandom (convenience) sampling procedure, which presented a threat to the survey's external validity (e.g., the ability to generalize the results to students who did not complete the survey). A nonrandom procedure was used because a longstanding priority
of the Indiana Youth Survey has been to provide local level data to any and all schools or school corporations that request it. While the results reported in this section should be interpreted with this consideration in mind, we refer readers to the 2016 Indiana Youth Survey report (https://www.inys.indiana.edu/docs/survey/ indianaYouthSurvey_2016.pdf), which included an assessment comparing the statewide convenience sample to a statewide stratified random sample. While not a formal research report, results indicated that the convenience and random samples produced statistically similar data in most cases.

To the extent that school districts have obtained information from every student in a particular grade level, the local results represent those community populations. In this respect, participating school districts can examine their own student response rates and decide how representative their survey data are for their local youth population. Formula 1 shows how the student response rate may be calculated from data in the local report provided to each participating school or school district.

## Formula 1

$\underset{\text { Rate }}{\text { Response }}=\binom{$ Number of }{ Respondents }$\left./ \begin{array}{c}\text { Total Number } \\ \text { of Students }\end{array}\right) \times 100$
Where "Number of Respondents" is the number of students who completed and turned the survey in, and where "Total Number of Students" is the number of students whom the school corporation intended to survey.

If the response rate is $90 \%$ or greater, then the district level results (not shown in this report) are likely to be representative of the local student population.

At the sub-state regional levels, the ability to generalize the data is much lower because many school districts, and therefore many children and adolescents in the regional populations, did not participate in the Indiana Youth Survey. As shown in Table 23, only 6.7 to 27.5 percent of students participated in the Indiana Youth Survey across regions. The best approach to address this limitation is to assess the extent to which the samples of student respondents compare to the entire population of students in each region. This comparison of regional respondents and the population is shown by gender, ethnicity, race, and grade level in Table 31. Although this comparison does not provide a basis for generalizing results at the regional level, it provides guidance on where the data do and do not coincide proportionally with demographic subgroups in the regional populations.

As shown in Table 31, the majority of samples either under or over-represent the proportions of students by gender, ethnicity, race, or grade level in a region. For example, in Region 7, White students are represented among those who completed the survey, while Black students are underrepresented. These biases should be taken
into consideration when interpreting the results of the Indiana Youth Survey data.
Table 31. Regional comparison of samples and population by demographics

|  | State |  | Region 1 |  | Region 2 |  | Region 3 |  | Region 4 |  | Region 5 |  |

* The sample is significantly different from the population ( $\mathrm{p}<.05$ ).
\# Missing responses are not included in calculations of the percentages for the sample.
The strength of this section of the Indiana Youth Survey is that it collects and reports valid and reliable data for local school corporations. At the state level, the data has the same degree of reliability. However, according to sampling theory, the state-level data in this section are less valid (Levy \& Lemeshow, 2003). This tradeoff reflects the state's current priorities for serving the substance use prevention needs of local communities. At the same time, statewide results from the Indiana

Youth Survey and the newly-collected random sample within the survey had a high degree of concurrence in 2016 and 2018. Due to this level of agreement, it is reasonable to compare the statewide Indiana Youth Survey data with national survey results. Furthermore, the level of agreement between the convenience sample data and random sample data at the state level from those years reinforces our confidence in the validity of Indiana Youth Survey data for this and previous years of administration, despite the interruption of the random sampling procedure in 2020 by COVID-19.

## HOW TO INTERPRET THE RESULTS

## Comparison of Regional Data

For the regional data tables, the symbols $\boldsymbol{\Delta}$ or $\boldsymbol{\nabla}$ are used to indicate statistically significant regional differences in prevalence of use compared to the entire state. The $\boldsymbol{\Delta}$ symbol indicates that the regional rate is higher than the state rate, and the $\boldsymbol{\nabla}$ symbol indicates that the regional rate is lower than the state rate.

## Generalizing Local Indiana Youth Survey Data to Local Populations

PI provides each participant school corporation with a local report of the Indiana Youth Survey results from its district. This section describes the method for estimating how well local data applies to local populations. PI strongly encourages school corporations to share the results of this analysis with citizens and organizations engaged in local surveillance and planning.

## The Response Rate

The response rate estimates how well the local results of the Indiana Youth Survey describe all the youth in a grade or grades, in a school or schools, or in an entire school corporation.

If the response rate is 90 percent or greater, then the results are likely to be representative of the population defined. If the response rate is lower than 90 percent, the results should be interpreted cautiously. In this case, the results might not be representative of students who were absent the day the survey was administered or of those who did not turn in a survey.

In any case, results do not generalize to those whose responses PI systematically excluded from tabulation (see the "Data" section, above, for details).

PI is unable to calculate the response rate for individual localities because one of the components of the response rate depends on information not collected along with the survey. This information, the Total Number of Students, is explained below.

Two pieces of information are required to calculate the response rate: "the total number of students" and "the total number of respondents."

## The Total Number of Students

The total number of students can only be determined by each school district.
The total number of students is the number of students that the school district intended to survey. For instance, if the intention was to survey all 9th- and 10thgrade students in all schools then the total enrollment number in Grades 9 through 10 would constitute the total number of students.

## Total Number of Respondents

Local reports of the Indiana Youth Survey issued to participating school corporations include a table similar to Table 32. The asterisk (*) in Table 32 illustrates where to locate the total number of respondents.

Table 32. Sample table from local report

## Frequency

Rejected questionnaires
Blank surveys/Refused to participate
Not truthfully at all response
Indicated fictitious drug (vivo) use
Rejected by gender check
Rejected by grade check
Rejected by grade and age check
Rejected by age and onset age check
Rejected by consistent use check
Rejected by dose check
Total Number of Usable Surveys
Total \#,\#\#\# * 100.0

## Calculating the Response Rate

To determine the response rate for a locality, divide the Total Number of Respondents by the Total Number of Students and multiply the result by 100.

$$
\underset{\text { Rate }}{\text { Response }}=\left(\begin{array}{c}
\text { Number of } \\
\text { Respondents }
\end{array} ~ / ~ \begin{array}{c}
\text { Total Number } \\
\text { of Students }
\end{array}\right) \times 100
$$

## Practical Significance

The local report contains a section titled Prevalence Rates for Alcohol, Tobacco and Other Drug Use. In this section the percentage of student participants who reported that they used specific drugs during the past month is presented. These rates are shown for the school district over a ten year period if such data are available.

Targeting prevention efforts at particular drugs might be appropriate even though local prevalence rates are not higher than those of the state. For instance, if sixthgrade students in a corporation had a prevalence rate similar to that of the state for a specific drug, but the rate itself was high, prevention or treatment programs might be needed for 6th-grade students.

Key points for interpreting prevalence rate results of the Indiana Youth Survey:

- Monthly prevalence is a general indicator of frequent or regular use of a drug.
- "Prevalence" indicates any use of a drug within the specified time frame, regardless of its severity or frequency within that time frame (for example, any use of marijuana in one's lifetime could be one time or two hundred times). Use monthly prevalence rates in conjunction with detailed frequencies of use (for example, 1-5 times, 6-19 times, 20-40 times, more than 40 times) that are provided in tables in the Frequencies section at the back of a local report.
